AnyView For Dynamics GP 2010 (June 2010)

Build updated for use with GP2010 RTM

For a Summary of changes in each Build, see the [Build History](#) section at the end of this document.

AnyView For Dynamics GP 10 (July 2007)

The Security Model for Created objects has changed, Security for all Smartlist Objects is managed through the Dynamics GP Security Tasks and Security Roles. (from the Security Task Window, Smartlist objects are Viewed by picking the Product = Smartlist, even for AnyView Creator Created Objects.

For a Summary of changes in each Build, see the [Build History](#) section at the end of this document.

	Features with this logo enhance AnyView Browser.
	Features with this logo enhance Dynamics/eEnterprise Explorer.

AnyView Version 4 New Features (September 2002)

XP Charting

AnyView Browser users can create, maintain, and view Charts by using Microsoft Office XP.

Detail View Wizard

AnyView administrators can create Detail Views: groups of master and detail information in a single AnyView Browser page.

July 2002

Object Auditor

Diagnose issues with AnyView Objects.

April 2002

View Crystal Reports

AnyView Browser

With AnyView Browser, you can now view Crystal Reports. Reports can be linked to Anyview Objects with parameters passed between the two, so you can view reports for a particular Customer, Vendor, Employee, Order, Project, et cetera.

Save Favorites

AnyView Browser

AnyView Browser users can now save their favorite searches for later reference, just as Dynamics Explorer users have been able to do for years.

Object Export / Import w/ Views

AnyView Creator

AnyView Browser

Now you can export and import Objects that use SQL Server Views to get information.

Object Summaries

AnyView Browser

Total and average numeric columns in AnyView Browser, allowing for adjustments based upon Order Type or any other column in the Object.

Site Management

AnyView Browser

AnyView Site Administrators can present their users with a friendly message while the system undergoes maintenance.

AnyView Version 3 New Features

Report Publishing

AnyView Browser

With AnyView Browser, files can be made available for viewing in your AnyView web application by using AnyView's Report Publishing functionality. The content of these files can be generated from various sources including Microsoft Word, Excel, Crystal Reports, and, most notably, Microsoft Dynamics™ GP reports saved to file. You establish security for reports or groups of reports, and Microsoft Dynamics™ GP reports can be viewed anywhere, at any time, with AnyView.

Drill Around

AnyView Creator

AnyView Browser

A common request of both AnyView Browser and Explorer users is the ability to be on an object and drill around to another related object for more information. This new capability effectively links objects together, allowing you to navigate from one view to another in a single mouse click. For example, suppose you are on the phone with a customer and are looking at their customer information in AnyView Browser or Explorer, and then want to know the status of their orders. You could Drill Around to another object, such as the Sales Transactions object, for a list of their orders and get the information you need. The Drill Around functionality will be available from the Go To menu with AnyView Browser and from the

Explorer Go To menu. Defining a new Drill Around is a feature that is included in AnyView Creator; however, they can be used in both AnyView Browser and Explorer.

Detail Views

AnyView Browser

We know from experience that many customers use Explorer as a navigation tool within their business management data, and now they can use AnyView Browser as well. Many AnyView Browser users will pull up a list of important information and say, “now I want to know even more.” The new Go To Menu will support the new Drill Around and Detail View features.

With the new Detail Views, additional business management information is available in many key areas, even over the Internet. For example, while using AnyView remotely, say you have pulled up the results of a view that lists the sales for the week in the Sales Transactions object that ships with Explorer. You would like to drill down on a particular invoice and see more information about that invoice, similar to a paper version of the document. With the Sales Transaction Detail View that ships with AnyView Browser, detailed sales order processing data is just a click away. Detail Views will initially be provided for: Accounts, Customers, Items, Purchase Orders, Prospects, Sales Order Processing Documents, and Vendors. Partners and Customers will also be able to customize Detail Views to meet the needs of the end customer.

Import/Export Improved

AnyView Creator

Now when you Import or Export an object from AnyView Creator, you will be able to keep all of the properties associated with the object, such as: data types, prompts, drop down lists, formats and go to windows.

Modifying an Object Improved

AnyView Creator

When modifying an object, favorites will be maintained whenever possible and security will always be maintained.

AnyView Build History

AnyView for Microsoft Dynamics™ GP 2010 Build 96 - June, 2010

This is the release for use with GP2010 RTM –

AnyView for Microsoft Dynamics™ GP 10.00 Build 94 - Sept, 2008

This is a maintenance release –

1) Non-power users could not build objects, because they had no access to tables in creator, with this build, the normal table security applies, if the user has access to the table in GP, then they will have access to the table for choosing in Creator.

2) This .cnk auto deletes users from the Accountable Activity table (ASI00998) if they are users not currently logged into GP (will delete rows for any user not logged into GP for the current Accountable Product.)

AnyView for Microsoft Dynamics™ GP 10.00 Build 92 - July, 2007

This is a maintenance release – no new features, Tested compatible with Microsoft Dynamics™ GP 10.00 RTM

AnyView for Microsoft Dynamics™ GP 9.00 Build 90 - Jan, 2006

This is a maintenance release – no new features, minor issues fixed, Tested compatible with Microsoft Dynamics™ GP 9.00 RTM (SQL security, login changes for external users)

AnyView for Microsoft Business Solutions – Great Plains 8.0 Build 87 - July, 2004

This is a maintenance release – no new features, minor issues fixed, Tested compatible with Great Plains and Great Plains Standard Version 8.00, and Microsoft Windows Server 2003

AnyView for Microsoft Business Solutions – Great Plains 7.5 Build 85 - April, 2003

This is a maintenance release – no new features, minor issues fixed, Tested compatible with Great Plains and Great Plains Standard Version 7.50, and Microsoft Windows Server 2003

AnyView for Dynamics/eEnterprise 7.00 Build 82 - November, 2002

AnyView Browser

- Support for localized AnyView object names and column names
- Support for rendering multi lingual characters in Internet Explorer and Netscape Browsers, when using AnyView with IIS 5+
- Support for Project Accounting 7.00 Smartlist objects

AnyView Creator

- Default Explorer Go Tos in AnyView objects now operate correctly when double clicked
- Project Accounting standard Explorer objects now functional

AnyView for Dynamics/eEnterprise 7.00 Build 77 - September, 2002

- XP Charting
- Detail View Wizard

AnyView for Dynamics/eEnterprise 7.00 Build 72 - July, 2002

Initial 7.0 Release

- Object Auditor

AnyView for Dynamics/eEnterprise 6.00 Build 64 - April, 2002

AnyView Browser

- View Crystal Reports
- Save Favorites
- Summarize numeric columns
- Manage Sites

AnyView Creator

- Export / Import Objects with SQL Server Views

AnyView for Dynamics/eEnterprise 6.00 Build 56 - December 21, 2001

- View HTML and PDF files using AnyView Report Publishing.

AnyView for Dynamics/eEnterprise 6.00 Build 50 - December 5, 2001

AnyView Browser

- Netscape 6 was not functioning properly with the prior build.
- Internet Explorer 6 back button did not function properly. A problem in IE 6 required additional code in AnyView to address the problem.
- Currency, Integer and Long Integer formats of fields/columns from Explorer and other third party objects were appearing improperly in AnyView due to a lack of a formatting utility. AnyView Utilities can now address formatting for all fields/columns for non-AnyView Creator objects. This did not impact AnyView Creator objects, as the formatting has always been available within Creator.
- Company Names with special characters caused display problems.
- Columns headings with special characters caused display problems.
- Special characters in Drill Around parameters caused go to problems.
- Special characters in Form parameters caused go to problems.
- Locale settings for currency fields supported. Fix primary supplied for French-Canadian customers.
- External Login Security: Upon designating a Dynamics/eEnterprise user as a Login Alias, security did not roll down from Login Type default settings.
- User Class permissions for a Favorite did not function properly.

AnyView Creator

- Export / Import Drill Arounds implemented. This was not part of any prior release.
- Conflict with Forms Printer use of shared scripting engine caused Forms Printer errors. Issue fixed in AnyView.
- SQL Searches with an apostrophe caused a SQL error.

AnyView for Dynamics/eEnterprise 6.00 Build 48 - October 2, 2001

- Drill Arounds in Explorer and AnyView Browser
- AnyView Browser Detail Views
- Improved Import/Export in AnyView Creator
- Improved Object Modification in AnyView Creator

AnyView for Dynamics/eEnterprise 6.00 Build 41 - May 30, 2001

- Performance improvement for Browser queries
- Change to Browser to allow Search Button to be visible/used before default favorite is displayed.
- Minor changes to Documentation

AnyView for Dynamics/eEnterprise 6.00 Build 39 - May 8, 2001

- Faster Login Time for AnyView Browser users
- View SQL Server Objects in Explorer Feature
- External Table Modification Improvements (DSN, user, password can be modified after initial creation)
- Detection of Crystal 8 DSN bug on install of server components
- Installation of Importable Example AnyView Objects and Goto Actions into the Dynamics\AnyView (6.00) Folder during the Creator install.
