New Features & Functionality Include:

Fixes and Changes New in Build 149

Server Based E-mail From Setup

Historically, the E-mail From list, available during 'To E-mail' Delivery Setup, was saved and modified in the Dex.ini file on each local workstation. The Server Based E-mail From Setup will now allow those setting to be stored in the database, eliminating the need to modify the Dex.ini file. See the Upgrade Guide for more details.

All Companies, Light Conversion for Upgrades

A new database upgrade method has been added to improve the experience of upgrading. In installations on a modern version of the software, conversion will run and complete much quicker. In systems with more than one company database and able to use the Light Conversion, the upgrade will convert all company databases from the first one logged into. This will eliminate the need to log into each company and perform a full upgrade. See the Upgrade Guide for more details.

Known Issues Corrected

PO issue –Printing POs and choosing Print Per Site, generated SQL Duplicate Key.
Double Quotes – Double quotes in the file name of E-mail Attachment caused Attachment not found error.
Project Delivery – In certain instances, Project would not present the Print or Deliver option when custom Delivery formats were used.
Report Writer Delivery – Changing Forms Printer Setup could cause Print or Deliver dialog to show even if printing with Report Writer.
Packing Slip Parameter – Fix to support Per Location Print Option.
Error Log Security - Removed E-mail error log from security group so all Emailing users will be able to view it without issue.
Master Record E-mail From – The Server Based E-mail From list will now control Master record setup as well.
Improved Compatibility for Report Writer Delivery - This new integration allows Forms Printer and GP options for Email Attachments.

Functionality New in Recent Versions

Forms Printer Plus

Forms Printer Plus includes all of the functionality of the Forms Printer Base System and allows printing from any window in your GP system including GP Add-on modules, 3rd party Add-ons, custom dictionaries.

Forms Printer for Web Client

This new module enables basic Forms Printer functionality in the GP Web Client.

Integration to GP Emailing Setup

This new integration allows a choice of Forms Printer or GP Setup for Message source, subject and Email to Addresses.

Integration to GP Attachments Setup

This new integration allows Forms Printer and GP options for Email Attachments.
