Forms Printer Family of Products

A Description of the Forms Printer Family of Products

The Forms Printer family of products provides integration from Dynamics GP widows and processes to custom reports designed in Crystal Reports and SQL Server Reporting Services thus allowing for greater flexibility in design, data access and delivery over the GP Report Writer. Forms Printer includes 3 modules with similar yet distinctly different functionality and licensing. These modules include:

Forms Printer Base: This module offers a tight integration to specific transactional printing such as Sales Order Processing Documents, Purchase Orders, Receivables Transactions, Statements and more. This tight integration means that Forms Printer delivers transactions with very powerful functionality for delivery to file, Email and print with options for controlling that printing everywhere in Dynamics GP that the transaction can be printed.

GP Email Replacer: As functionality included in the Forms Printer Base module, the GP Email Replacer enables Modern Authenticated Emailing from GP2018 and 18.X versions where the functionality does not exist or is experiencing issues.GP Email Replacer allows users to continue using the system exactly as they did prior to Microsoft's role out of Modern Authentication, emailing using Word Templates an using all of the GP Email setup. No need to switch to Crystal Reports or SSRS. And no additional setup in order to Email.

Forms Printer for Project: This module is used specifically for the printing of Project Accounting invoices and Purchase Order but has all of the tight integration capabilities of Forms Printer Base.

Forms Printer Plus: This module offers integration to all products, series and windows within Dynamics GP allowing reports to be printed from the window of your choice and delivered to file, Email or print.

Forms Printer for Web Client: This module offers access to some functionality of Forms Printer Base, Project and Plus while printing from the Dynamics GP Web Client.

For more on features and licensing of each module see the Forms Printer User Guide.

The primary focus of this document is to describe the functionality of Forms Printer Plus in contrast to that of Forms Printer Base and Forms Printer for Project so it is apparent why one would be used over the other.

Forms Printer Base and Forms Printer for Project should always be used when printing the documents to which they integrate. The reason for this is the much tighter integration to process, printing and delivery. A full list of transactional documents available in Forms Printer Base and Project can be found in the Forms Printer User Guide.

Forms Printer Plus functionality is best used for integration to general report printing, master record windows, other window that Forms Printer Base and Forms Printer for Project do not such as those from third party products, add on modules and customizations.

A wide range of everyday issues and needs are served across nearly every Dynamics GP customer demographic making the Forms Printer family of products the ideal vertical reporting solution for better, more powerful data access and delivery.
